

Lunar Eclipses and the Future of Man

Krsanna Duran has proposed that Lunar Eclipses are important indicators of Future History, and has recently focussed on the last three Lunar Eclipses of 2009: 7 July; 6 August; and 31 December.

I also think that Lunar Eclipses are important, so here is my take on those (and a few others). Those three are shown on the following map (adapted from a map by Krsanna Duran - eclipse images are from a Goddard Space Flight Center web site, mostly by Fred Espenak):

the triad starts on 7 July 2009 in the Pacific Ocean

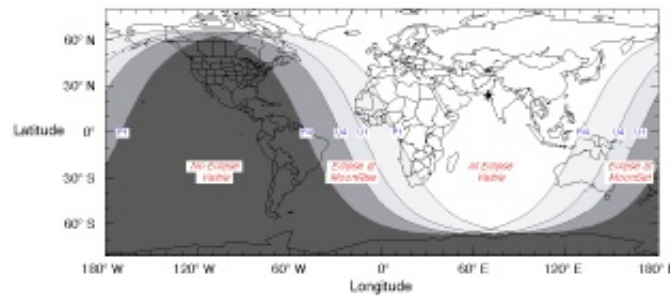

where the Toba volcano around 70,000 years ago killed most humans, but left a few survivors to carry on

then on 6 August 2009 goes to Africa,

where modern humans began to evolve

then on 31 December 2009 goes to Africa, India, China and EurAsia

where most humans migrated after leaving Africa,

so you might say that

the 2009 Lunar Eclipse Triad is replicating human history.

As to the future (after the end of 2009):

the 26 June 2010 eclipse seems to be Pacific Ocean (similar to 7 July 2009)

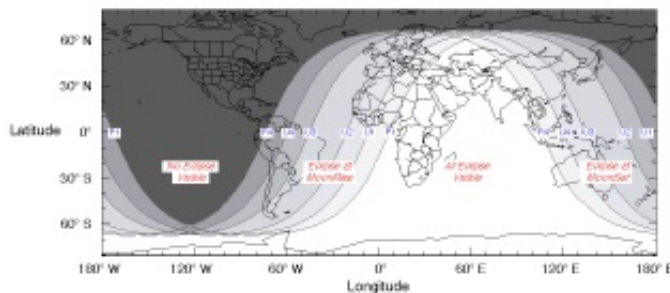

perhaps indicating the completion of the Triad cycle and start of a new cycle,

with the **21 December 2010** eclipse being centered on the USA

showing that the next big thing would be USA-related (probably the collapse of its financial system and the end of its status as the Earth superpower).

The next lunar eclipse is on 15 June 2011 at the Middle East,

probably indicating a global oil supply crisis following the USA financial collapse.

and that is followed by the lunar eclipse of **10 December 2011** at China,

probably indicating the rise of China as the new Earth superpower.

As for 2012:

the lunar eclipse of 4 June 2012 is at the central Pacific Ocean

heralding a Pacific-centered conflict between China and the USA. To check on the validity of interpreting the 2012 central Pacific eclipse 2012 as indicating an East -West Conflict between China and the USA, compare the Lunar Eclipse of my birthday, 13 March 1941, which was also centered on the central Pacific Ocean

and foreshadowed the East-West Conflict between Japan and the USA.

The lunar eclipse of 28 November 2012 is at China (similar to 10 December 2011)

indicating victory for China in its conflict with the USA.

The next Lunar Eclipse after the end of 2012 (the critical point of Maya, TimeWave, etc) 25 April 2013 near Africa

Since Africa is the Origin-Place of Humanity,
maybe 2013 will see the Origin of a New Phase of Earth Civilization.

Do Solar Eclipses tell a Similar Story ?

Instead of the Triad of 3 Lunar Eclipses in the last half of 2009, there was only one Solar Eclipse then:
The solar eclipse of 22 July 2009 at China and the central Pacific Ocean

indicates the emergence of China as the primary power of the Pacific.

The solar eclipse of 15 January 2010 at Africa, India, and China

indicates a shift in favor of those humans whose ancestors left Africa for India and China.

The solar eclipse of 11 July 2010 at the Pacific Ocean

indicates a Pacific-centered arena of conflict between East and West.

The solar eclipse of 4 January 2011 at the Middle East

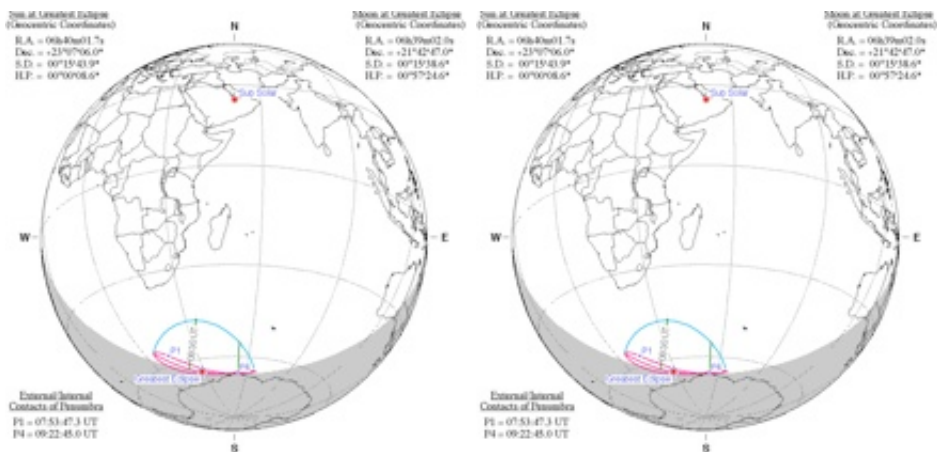

probably indicates a global oil supply crisis.

The solar eclipse of 1 June 2011 at North America, but omitting most of the USA,

probably indicates the collapse of the USA global financial system and the shift of Earth superpower status away from the USA.

The solar eclipses of 1 July 2011 and 25 November 2011 at Antarctica

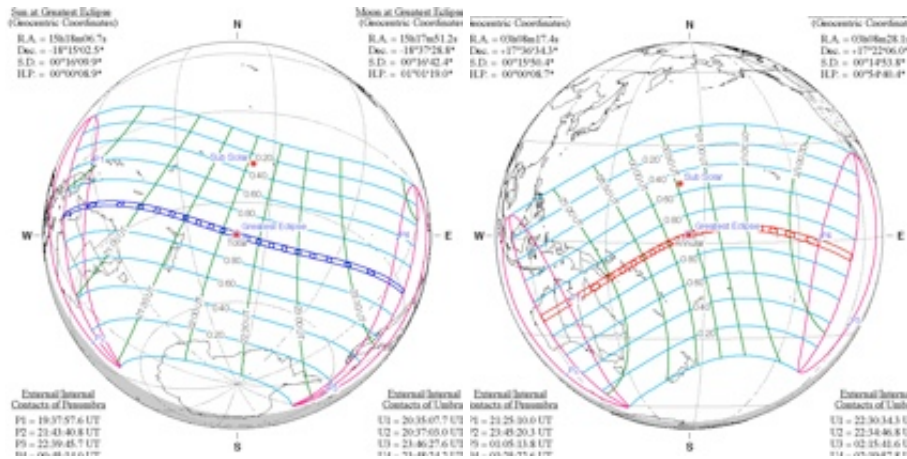

may indicate a period of global turmoil in the wake of the collapse of the USA and the ascent of China.

The solar eclipse of 20 May 2012 from China to the USA

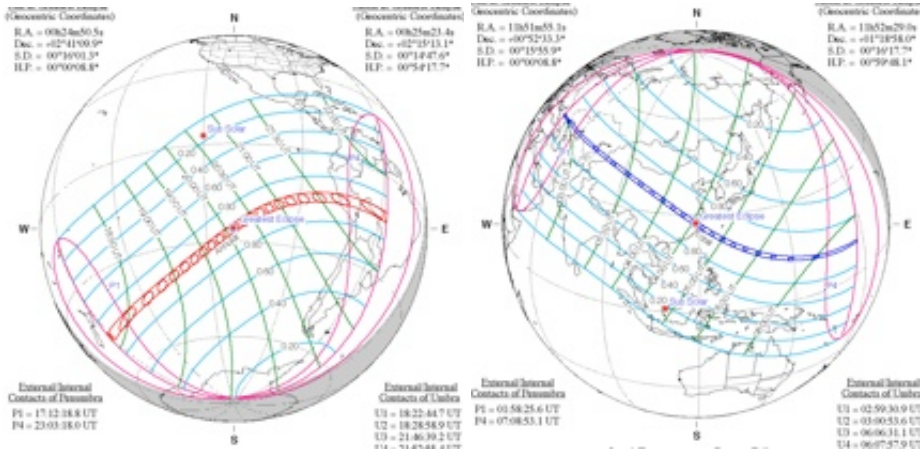

indicates the extension of China's dominance to the collapsed USA.

The solar eclipses of 13 November 2012 and 10 May 2013 at the Pacific Ocean

indicate the Pacific-centered East-West conflict between China and the USA. To check on the validity of interpreting the 2012/2013 central Pacific eclipses as indicating an East -West Conflict between China and the USA, compare the solar eclipses of 27 March 1941 and 21 September 1941

which were at the Eastern Pacific Ocean near America and the Western Pacific Ocean near Japan, respectively,

The solar eclipse of 3 November 2013 at Africa

is a Hybrid Solar Eclipse, with both Annularity and Totality in various parts of its path.

**Since Africa is the Origin-Place of Humanity,
maybe 2013 will see the Origin of a New Phase of Earth Civilization.**
